

Maciej Małachowski

AI Engineer · Agentic AI Developer

maciejmalachowski1@gmail.com · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

ABOUT

AI Developer specializing in the design and delivery of practical AI solutions for business processes. I combine expertise in LLMs, automation, systems integration and data analysis with a delivery-focused mindset oriented around real-world client implementations. My work covers agentic systems, document processing, workflow automation, ERP integrations and tools that streamline operational and accounting work.

Previous experience as a coach at a sailing club involved team management, working in dynamic conditions, and resolving high-pressure situations. Working with children developed communication, adaptability, and decision-making skills in fast-changing environments.

PROFESSIONAL EXPERIENCE

AI Developer

autoMEE · 03.2025 – present

- Development of the core accounting document workflow platform Flowmee, including document processing logic, process automation and handling of data extracted from invoices, CMR and accounting documents.
- Design and delivery of integrations with client ERP systems, covering technical client communication, implementation process analysis, data mapping, integration logic and workflow construction mainly with n8n.
- Building tailor-made solutions adapted to clients' operational, document and accounting processes, including automation of data flow between systems, document validation and streamlining the work of business teams.
- Designing AI logic for document processing, data extraction, validation of accounting values and comparison of data from source documents against data entered into ERP systems.
- Using AI-assisted development tools such as Claude Code and Codex for faster prototyping, refactoring, testing and delivery of production features.
- Implementation of advanced automations covering document handling, systems integrations, data processing, client communication and operational process optimization.
- Managing context when working with LLMs — structuring prompts, decomposing tasks into stages and designing stable flows for complex business processes.

Technologies: [Python](#), [JavaScript](#), [TypeScript](#), [OpenAI API](#), [Claude](#), [Claude Code](#), [Codex](#), [REST API](#), [Webhooks](#), [n8n](#), [Zapier](#), [GoHighLevel](#), [Voiceflow](#), [Playwright](#), [Git](#), [Docker](#)

Junior Data Scientist

MLJAR · 06.2024 – 10.2024

- Co-development of the MLJAR-supervised library (AutoML), including training pipeline optimization and stabilization of system components.
- Diagnosing and fixing bugs in core modules of the library, improving reliability of the open-source software.
- Authoring and updating technical documentation for users and developers.
- Preparing AutoML use-case examples on real-world datasets.
- Publishing technical articles on AutoML and modeling best practices.

Technologies: [Python](#), [Scikit-learn](#), [Pandas](#), [NumPy](#), [MLJAR-supervised](#), [Git](#)

SELECTED AI SOLUTIONS DELIVERED

AI Platform for Personal Budget Analysis

- Full-stack application for analyzing bank CSV files, enabling transaction categorization, spending search and natural-language Q&A.
- Implementation of a CSV importer that auto-detects bank file layouts and a categorization engine based on rules and merchant mapping.
- Integration of Claude models for handling unknown classification cases, plus a Q&A panel backed by safe, scoped database query functions.

Technologies: [Next.js](#), [React](#), [TypeScript](#), [Supabase](#), [Claude](#), [Tailwind](#), [Zod](#), [Vitest](#)

Sea Freight Rate Search & Comparison Platform

- Designed the logic and platform for scraping and handling multiple carriers to automate searching, comparing and sharing sea freight rates.
- Built scraping agents that fetch rates from carriers, process them and persist them in the database.
- Created an AI layer for searching, analyzing and presenting rates in a way that makes it easy for the client to work with a large number of offers.
- Automated a process that previously required manual checks across multiple sources and comparison of shipping data.

Technologies: Python, Playwright, Claude, OpenAI, n8n, Supabase

AI System for Generating Excel Templates from Invoices and CMR Documents

- Built a system that extracts data from carrier invoices and CMR documents and transforms it into structured Excel templates.
- Designed extraction, mapping and normalization logic for document data to support downstream operational and accounting processing.
- Extended the solution with a module for foreign invoices, handling different document formats and varying data structures.
- Document automation that reduced manual data re-entry and accelerated file preparation for the client.

Technologies: Python, OpenAI, n8n

Accounting Data Validator for an ERP System

- Designed and delivered AI logic validating accounting data submitted by the client together with source attachments.
- The system compares hundreds of rows of accounting data against values from invoices and source documents.
- Automatic detection of discrepancies between data entered into the ERP system and source documents, reducing human error and improving accounting accuracy.
- Mechanism supporting operational teams by flagging potential mismatches before the final data import into the system.

Technologies: Python, OpenAI, n8n

TECHNICAL SKILLS

Programming Languages: Python, JavaScript

AI & LLM Systems: Agentic AI, Prompt Engineering, RAG, LangChain, LlamaIndex, OpenAI API, Claude, Gemini, Hugging Face

Machine Learning & Data Analysis: Scikit-learn, MLJAR-supervised, Pandas, NumPy

Automation & Integrations: REST API, Webhooks, n8n, Zapier, GoHighLevel, Voiceflow

Backend & Applications: Flask, Streamlit, Docker, Playwright

Tools: Git, GitHub, Linux

EDUCATION

Mathematical Modeling and Data Analysis

University of Gdańsk · 2023 – present · Expected graduation: 2026

Programming Technician

Zespół Szkół Elektrycznych im. prof. Janusza Groszkowskiego · 2019 – 2023

LANGUAGES

Polish – native · English – B2
